

I have extensive experience in software development, having worked for both large and small organizations throughout my career. I thrive on challenges and enjoy tackling them as part of a dedicated team. I have successfully navigated several career transitions to ensure that my skillset remains relevant for developing new software and enhancing existing large systems efficiently.

As part of my commitment to continuous learning, I have undertaken projects that include webXR and most recently generative AI.

My expertise in cloud development is strong, particularly in areas such as asynchronous processing and handling dynamic data in high-performance environments. This allows me to work seamlessly and proficiently with any programming language. Additionally, my knowledge of HTML5 APIs, CSS, and JavaScript enables me to easily adapt to various frameworks, as they ultimately rely on this common foundation (excluding native apps).

To provide a recent and well-documented example of my work, please refer to <https://unacog.com/> (more details can be found on my resume).

Thank you for considering my application. I look forward to the opportunity to discuss how my skills and experience can contribute to your organization.

Sincerely,
Samuel (Sam) Huelsdonk
